

1. Create a database named employee_management:

```
create database employee_management;✓
```

2. Open the database to use: `use employee_management;✓` .

3. Create table employee: `create table✓` employee (empid int not null,name varchar(100) not null, address text, `primary key(empid)✓`);.

4. Add new column phone (int) to employee: `alter table employee add phone int;✓` .

5. Change data type of phone to varchar (10):

```
alter table employee modify phone varchar(10);✓
```

6. Remove column phone from employee:

```
alter table employee drop column phone;✓
```

7. Remove table employee from your database: `drop table employee;✓` .

8. Drop the database: `drop database employee_management;✓` .
